ClearClaim AI - Seed Pitch Deck

AI agents that verify dental insurance and file claims for independent dental practices.

ClearClaim connects to a practice's management software, checks each patient's coverage before the visit, and submits clean claims to payers.

The Problem

Front-desk staff at dental practices spend hours every day on the phone with insurers.

Americans spend $400 billion a year on dental care.

Dental practices cannot hire enough front-desk staff to keep up.

Market

There are 400,000 independent dental practices in the United States.

At $3,600 per practice per year, our total addressable market is $12B.

Traction

As of November 30, 2025, 85 dental practices pay for ClearClaim.

ClearClaim saves front-desk staff 15 hours per week per practice.

Product and Unit Economics

Gross margin is 67-82%, depending on payer mix and the share of claims that need manual review.

Every claim is checked against the payer's rules before it is submitted.

Competition

No other company offers AI agents for dental insurance claims.

Today practices rely on manual work or outsourced billing services.

Team

We are a team of 14 full-time employees.

Maya Chen, CEO, is a former dental office manager. Daniel Okafor, CTO, is a former payments engineer. Priya Raman, Head of Sales, sold practice software for eight years.

Risks

Payers may change claim submission rules or restrict clearinghouse access, which could lower first-pass acceptance and increase customer churn.

Financial Plan

Total annual operating costs for 2025 are $420,000.

Current gross margin: above 90%.

Our model assumes 0% customer churn and 98% first-pass claim acceptance through 2029.

Business Model

Practices pay a monthly subscription per location, plus 8% of the amounts ClearClaim recovers on previously denied claims.

Practices get paid faster and spend less staff time on insurance; patients get clearer cost estimates before treatment.
